## Incident Feedback Report

### Incident Feedback Report

Site: NW House  
Date: Thu 18 Sep 2025  
Initial incident type: Fire Alarm Activated  
Incident Manager: N/A

Initiated by: Rich Reid  
Time: 11:35:14  
Reported location: Unknown  
Unique incident ID: 379

### What went well:

**Sarah Johnson:** Everyone moved calmly out of the building straight away, and visitors followed instructions without any issues.  
**James Miller:** The evacuation was completed quickly, and the fire marshals checked their areas as planned.  
**Aisha Patel:** Staff were reassuring to visitors, which kept the atmosphere calm.  
**Mark Davies:** Everyone left the building quickly, and no exits were blocked.  
**Craig Little:** A very efficient response due to Marshal Eye  
**Saul Hickey:** Great communications

### What didn't go well:

**Sarah Smith:** A few people were unsure where the nearest exit was, so they hesitated before leaving.  
**Bill Henry:** The alarm was very loud in reception - a few visitors seemed startled.  
**Spencer Butterworth:** Everyone moved calmly out of the building straight away, and visitors followed instructions without any issues.  
**David Barrett:**

### What would you do differently next time:

**Sarah Johnson:** Better signage in the reception area would help guests find the exit quicker.  
**James Miller:** Review the sensitivity of the detector in reception, as the air freshener set it off.  
**Aisha Patel:** Assign a specific person to liaise with the fire service during any alarm.  
**Mark Davies:** Deliveries should be directed away from assembly points during evacuations.

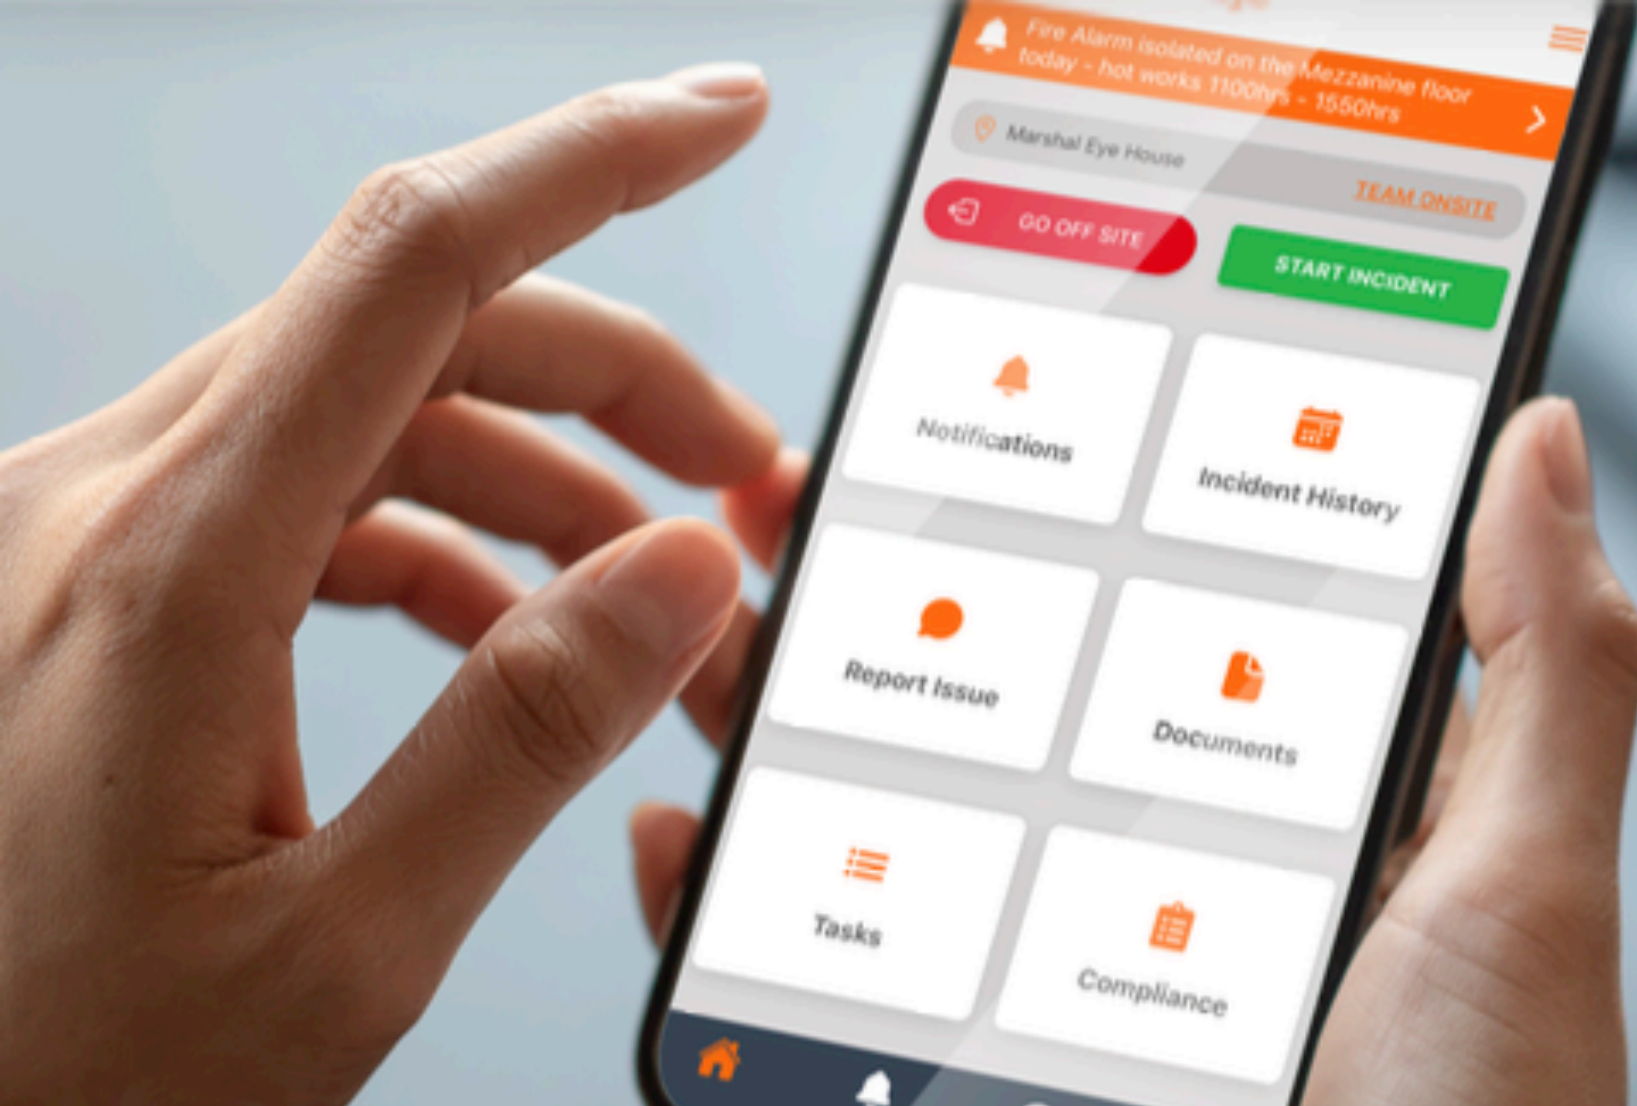

### Other comments/observations:

**Sarah Johnson:** The alarm was very loud in reception - a few visitors seemed startled.  
**James Miller:** The assembly point worked well, everyone accounted for within five minutes.  
**Aisha Patel:** Visitors weren't sure where to stand at the assembly point - clearer instructions would help.  
**Mark Davies:** This highlights the need to brief all staff on avoiding aerosols and air fresheners near detectors.

All staff can submit feedback through the App. This is automatically compiled into a single report allowing you to fully evaluate your response.
